# Requirements – Private Services

**No infrastructure  
responsibility**

**Highly available**

**Backup/recovery**

**Private office connectivity**

# Infrastructure as a Service (IaaS)

Virtual datacenter

Compute

Storage

Networking

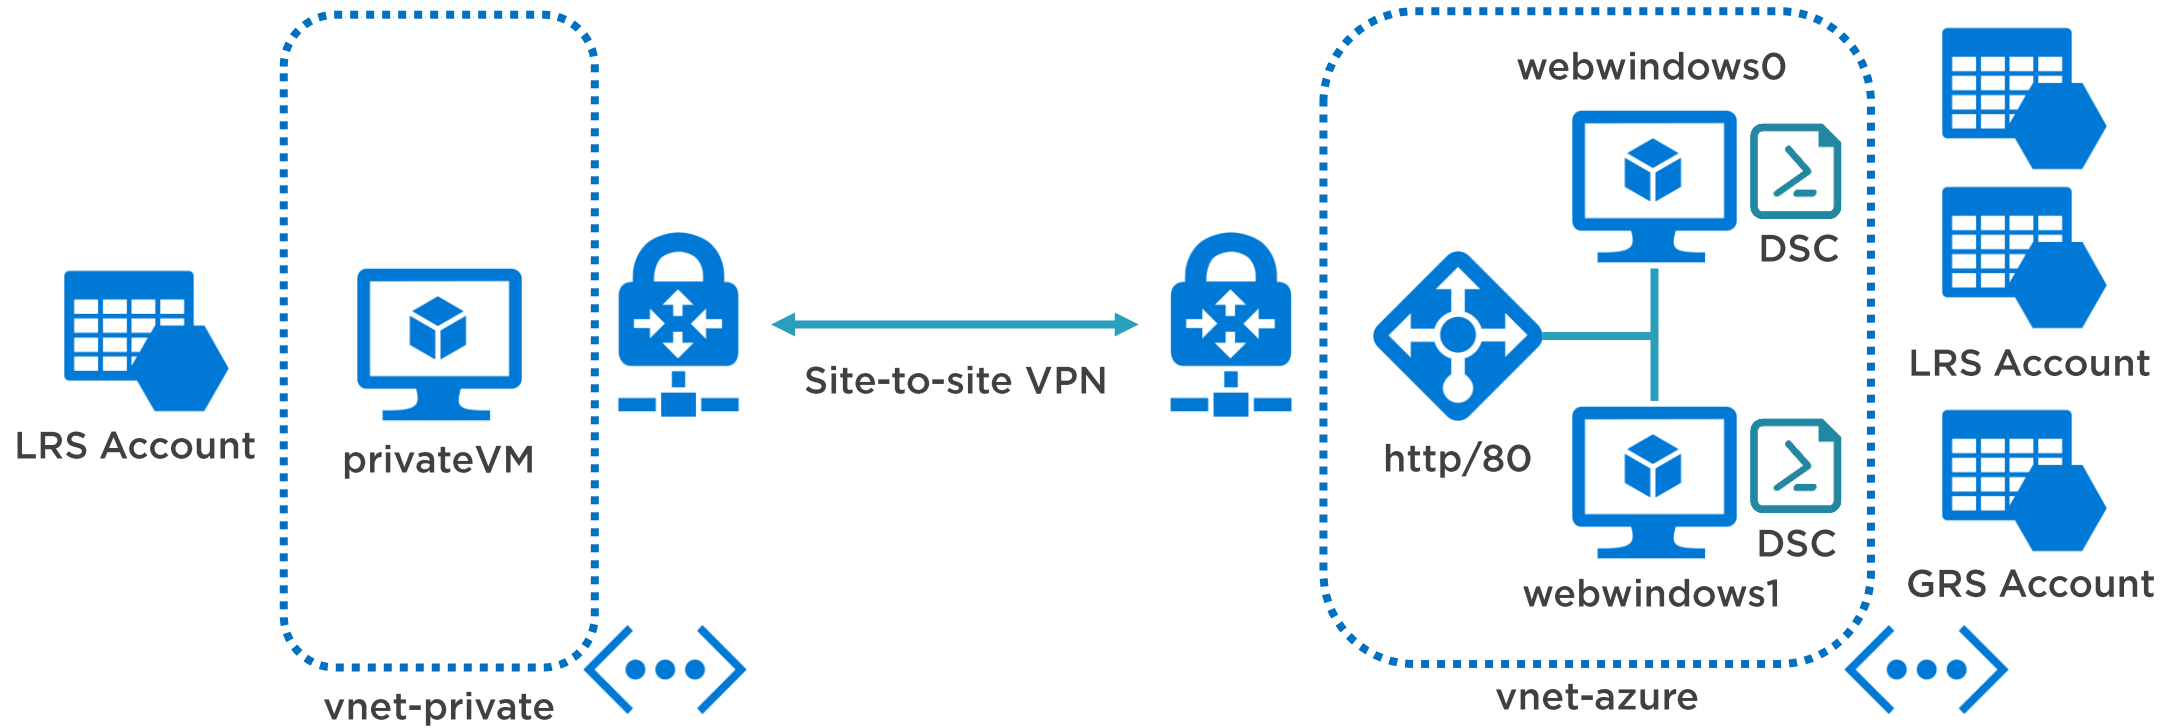

Backup/restore

Business continuity

# IaaS - Solution Overview

# Requirements – Public Services

**No infrastructure  
responsibility**

**Easy to scale**

**Deploy from code**

**Easy to monitor**

# Platform as a Service (PaaS)

Builds on IaaS

Runtime

Middleware

Operating system

Applications

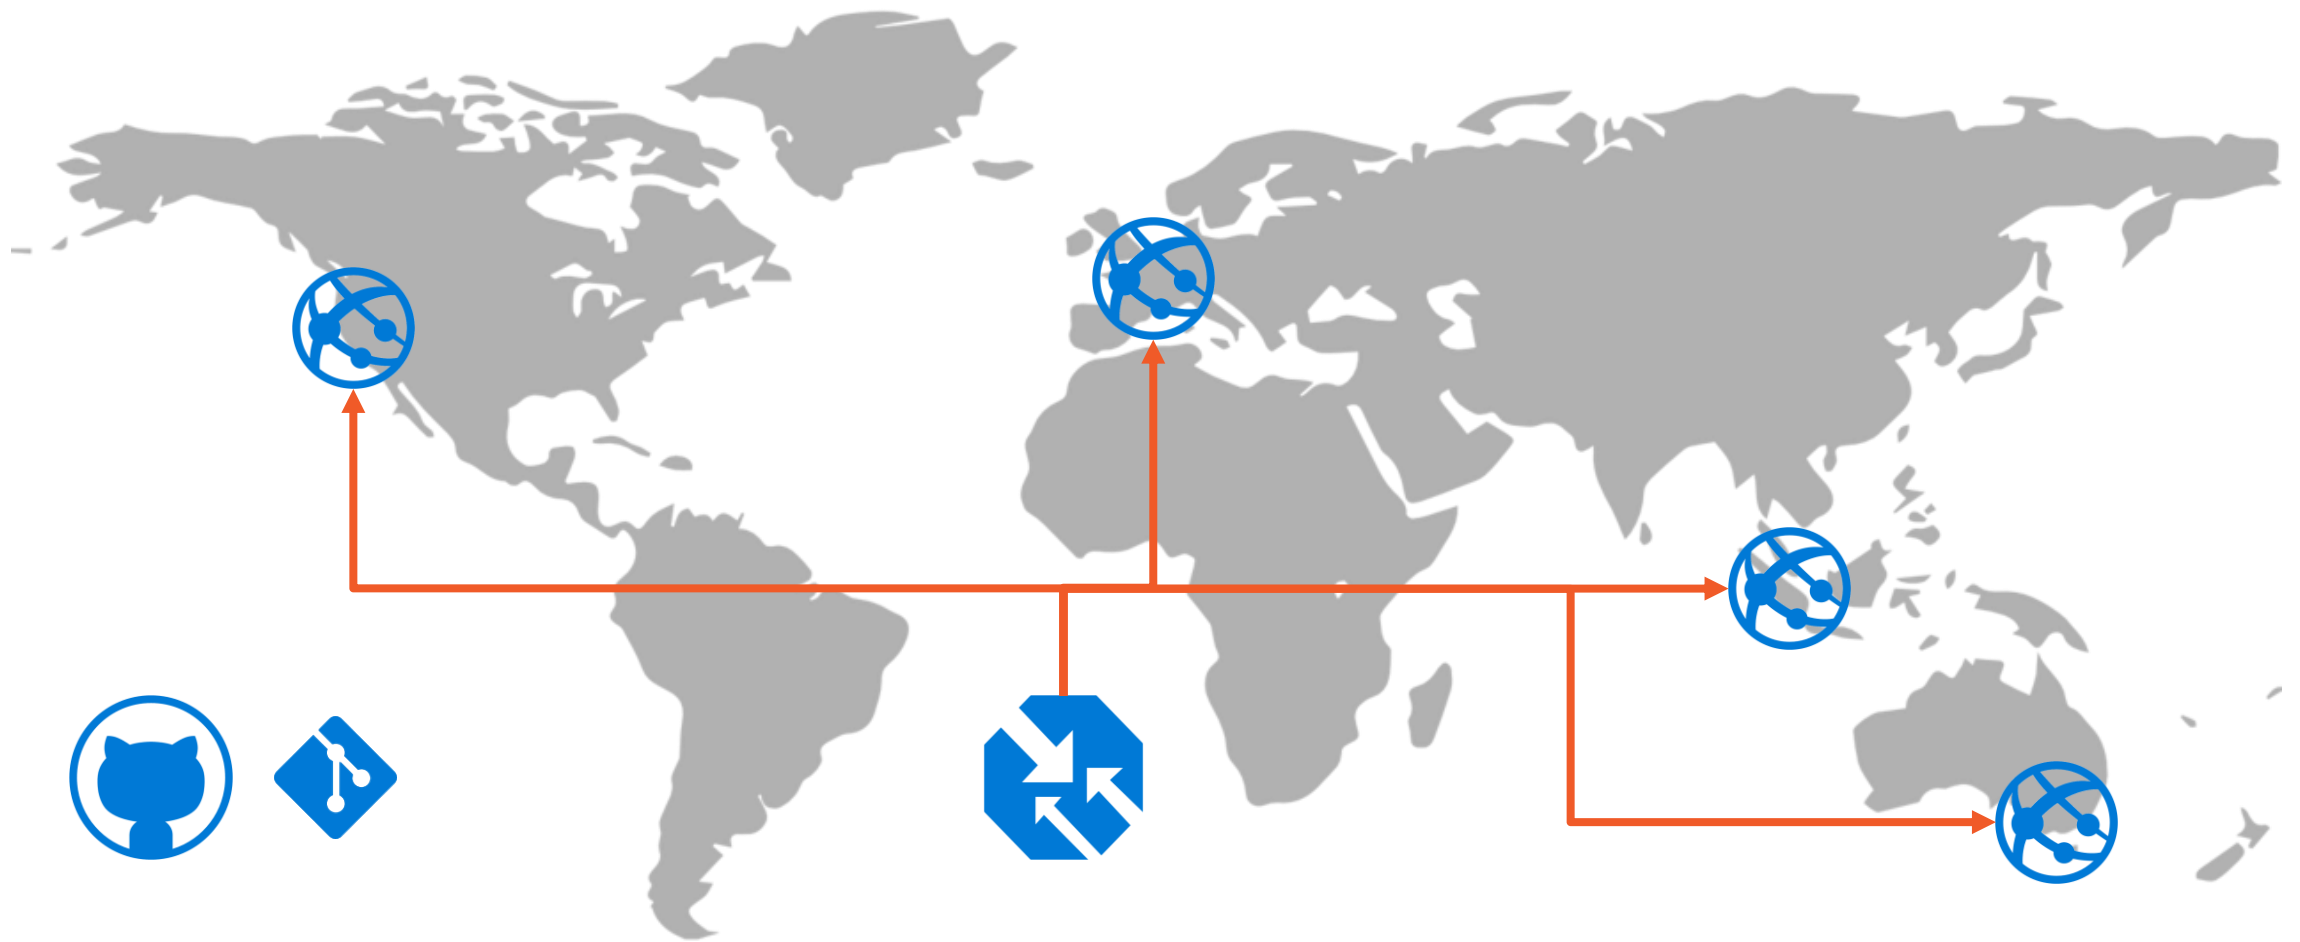

Data

# PaaS - Solution Overview

# Prerequisites

**Microsoft Azure subscription**

**Azure PowerShell**

**Visual Studio Community Edition**

**Azure Software Development Kit (SDK)**

**Visual Studio Code (VSCode)**

**ARM Extension for VSCode**

# Planning and Installing Chef

<https://github.com/jamesbannan/pluralsight>

# Module Summary

**Introduced Contoso**

**Discussed cloud-first strategy**

**Assessed private service requirements**

**Discussed Platform as a Service**

**Detailed proposed PaaS solution**

**Assessed public service requirements**

**Discussed Infrastructure as a Service**

**Detailed proposed IaaS solution**
