Ways to Debug in Visual Studio Code

Single File Debugging

Workspace Debugging

Auto Formatting

```
$services = Get-Service RemoteRegistry,EventLog

foreach ($service in $services){$filter = "Name = '$($service.Name)'"

    Get-WmiObject -Class win32_service -Filter $filter

}       Get-WmiObject -Class win32_service -Filter $filter

}
```

Debugging PowerShell

Scripts

Functions

Modules

Demo

Single File Debugging

Workspace Debugging
- Creating a launch.json

Auto Formatting

Debugging PowerShell
- Scripts
- Functions
- Modules

Summary

Ways to Debug in VS Code

- Using single file debugging
- Setting up a workspace for debugging

How to use Auto Formatting

Debugging PowerShell

- Scripts
- Functions
- Modules
